## Assignment 7 (NCERT Class 12)

## Gautam Singh (CS21BTECH11018)

Abstract—This document contains the solution to Question 5 of Exercise 13.1 in Chapter 13 (Probability) of the NCERT Class 12 Mathematics Textbook.

**Exercise 13.1, Q5.** If  $Pr(A) = \frac{6}{11}$ ,  $Pr(B) = \frac{5}{11}$  and  $Pr(A \cup B) = \frac{7}{11}$ , find

- (i)  $Pr(A \cap B)$
- (ii) Pr(A|B)
- (iii) Pr(B|A)

Solution: We know that, given events A and B,

$$Pr(A \cap B) = Pr(A) + Pr(B) - Pr(A \cup B) \quad (1)$$

and also,

$$Pr(A|B) = \frac{Pr(A \cap B)}{Pr(B)}$$
 (2)

Using (1), we get

$$\Pr(A \cap B) = \frac{6}{11} + \frac{5}{11} - \frac{7}{11} = \frac{4}{11} \tag{3}$$

From (2) and (3),

$$Pr(A|B) = \frac{Pr(A \cap B)}{Pr(B)} = \frac{4}{5}$$
 (4)

and

$$\Pr(B|A) = \frac{\Pr(A \cap B)}{\Pr(A)} = \frac{2}{3}$$
 (5)

The C code ./codes/7\_1.c verifies the solution, within limits of float precision.
